This is the main view controller which will be the default display. The main display is the foods of the users following. This essentially is a history of the user's friends and their food reviews and experience. In addition, from the main display the user will have the ability to search for foods and view trending and personal account information.

This is the display when a food item is clicked on. The view controller will display the name of the item, image, rating, description and the location of the where the item is located. This format is essentially the outline of all food items located throughout the app.

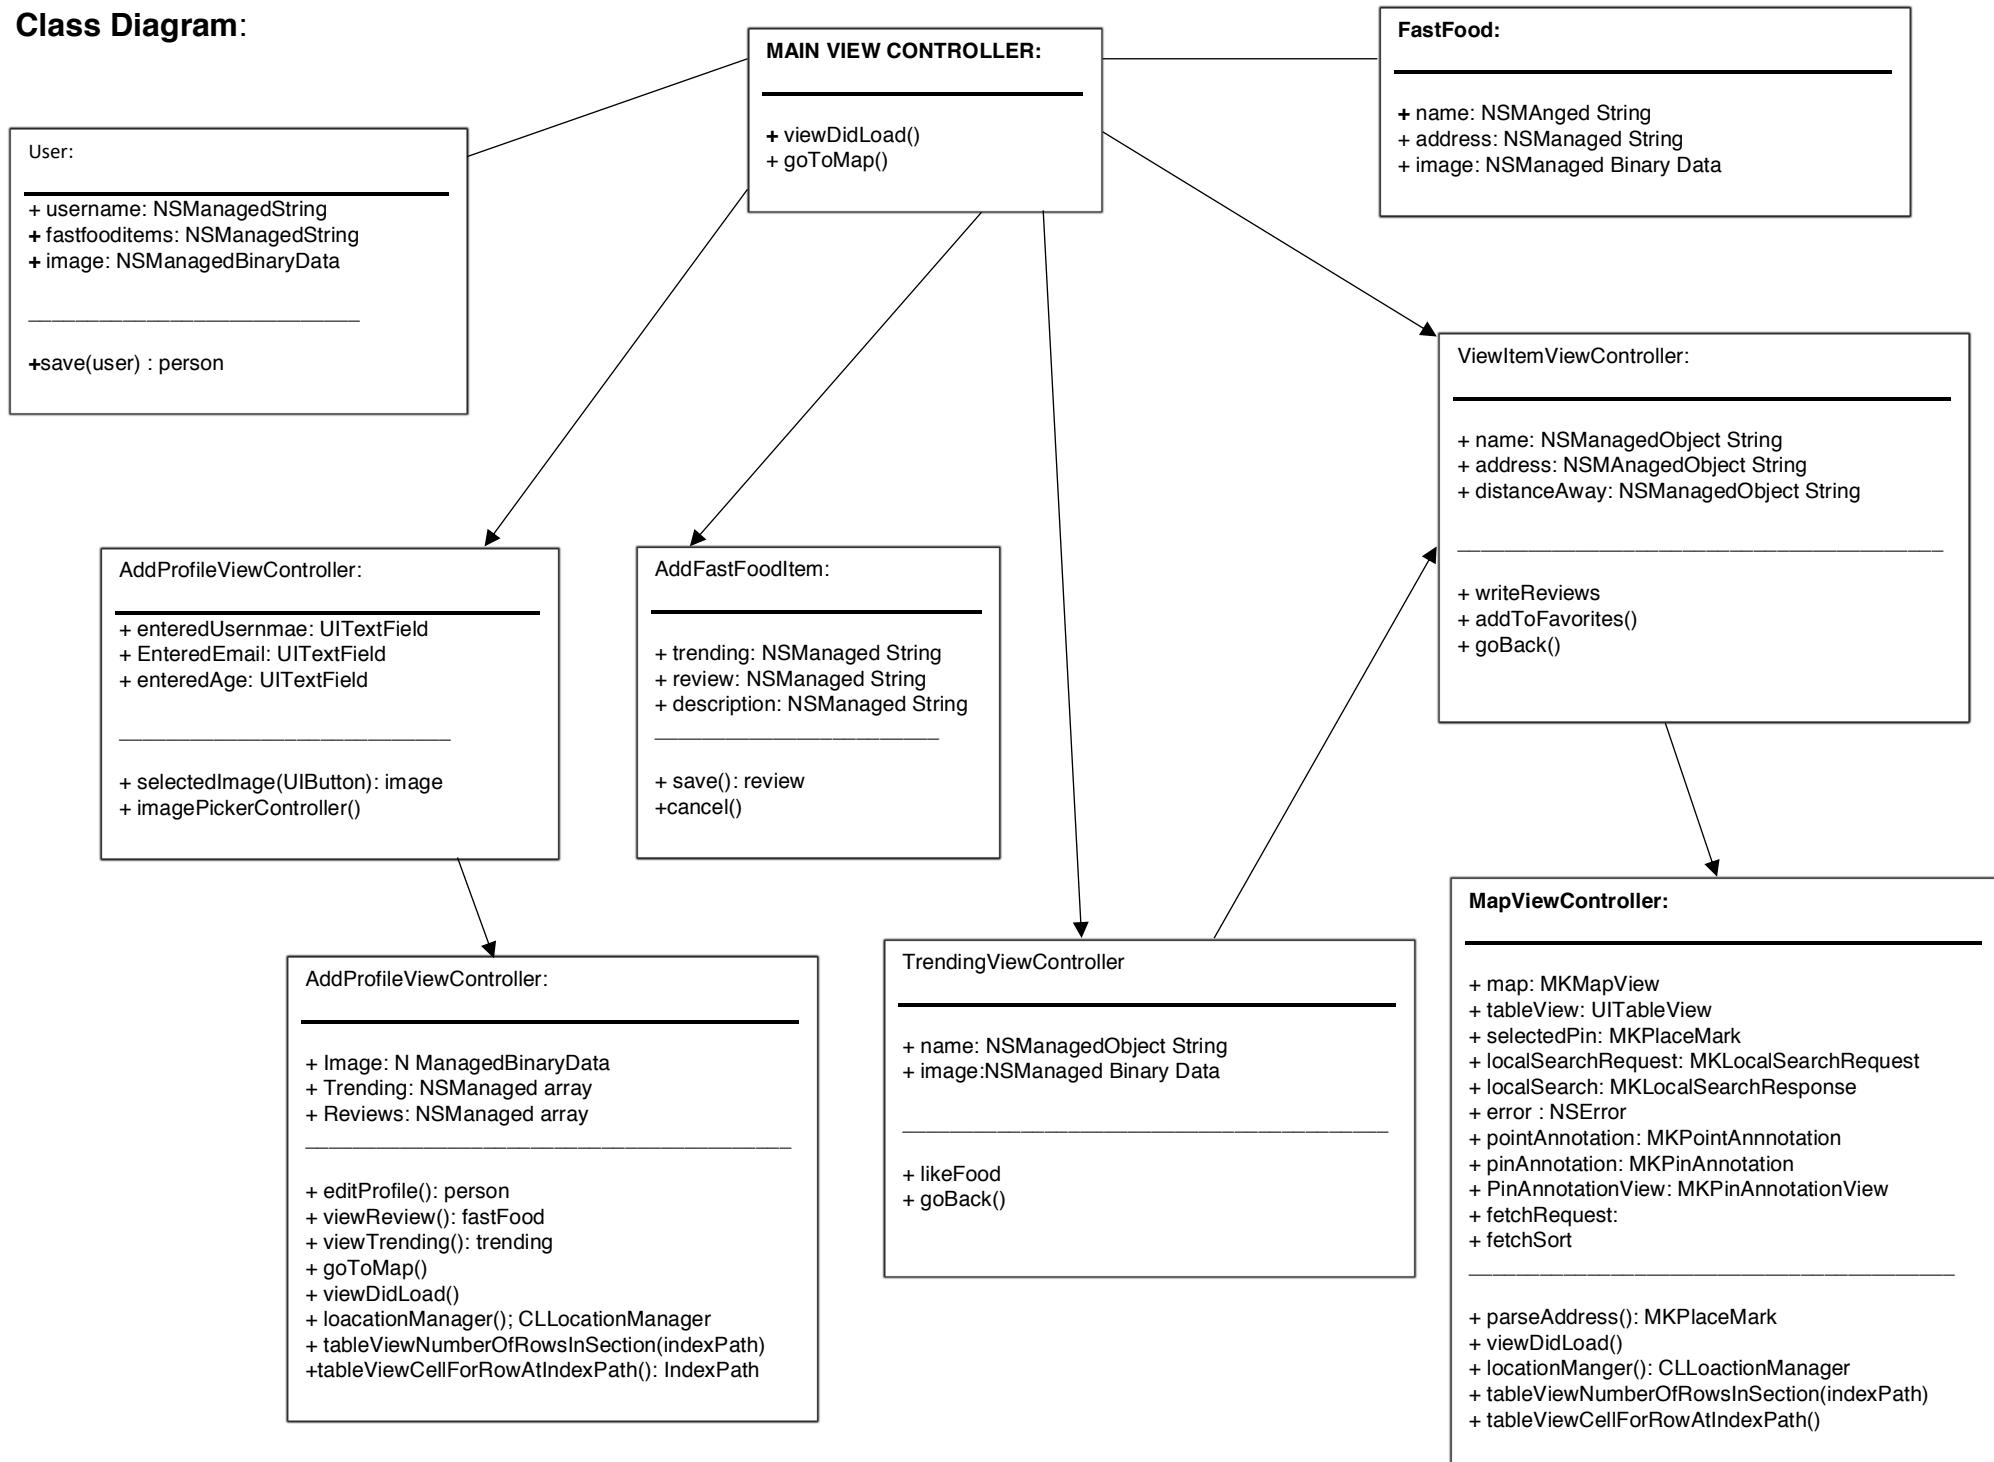

This is the trending view controller. The trending view controller will display nearby foods from various user that are most popular. The user will have the ability to search for specific foods as well.

After the account is created this will be the format of the users profile. The user will have the ability to follow personals that he/she is more interested in. In additions, other users will have the ability to follow as well. The personal account view controller will display images and review that the user had taken and written. Personal profile can be viewed by other users when clicked on.
